

Major project: firmness

fikatrail.com

Hosting:

Shared hosting:

2.83 / month for 24 month term

- Installations for WordPress *
- Free SSL certificate as standard.
- More disk space with comparable Clook package (50GB)
- Possibility of upgrading if/when necessary
- Free CDN

Front-end technologies:

HTML

- Semantic HTML5

CSS

- BEM
- SASS
- Media queries/
CSS Grid.

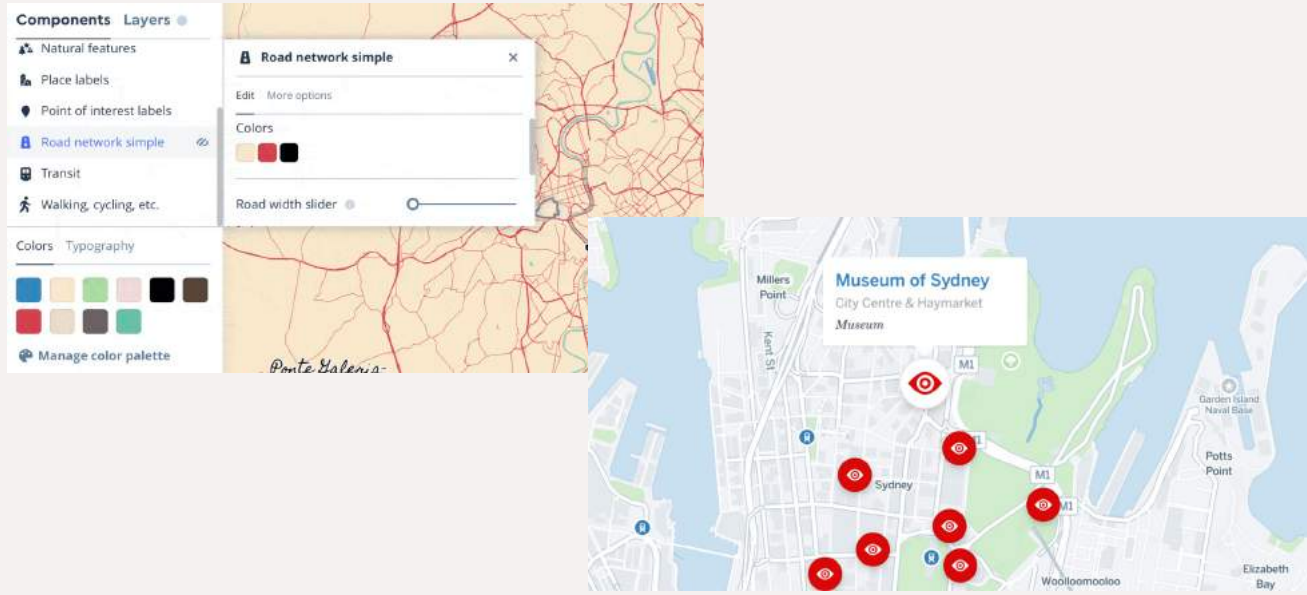

JavaScript

- Mapbox*
- Must avoid blocking user interaction.
- Loading order.

A few more specifics:

mapbox

Super customisable, but equally, a steep learning curve...

A few more specifics:

SVGs & images

- Likely to be an image & SVG-heavy site.
- Resolution switching vs art direction.
- Inline SVG with `<svg>` - 'Chris Coyier's Practical SVG'
- Considering accessibility with SVGs - 'Tips for creating accessible SVGs' – Leonie Watson

CMS – the original plan:

- Use WordPress as my CMS
- Chance to learn a popular, sought-after CMS/templating process
- Option to use third-party content/plugins.

But...

- Might not be 'needed' for this particular project – particularly in terms of updates, or lack thereof of regular ones.
- In terms of prioritisation of time, this might not be a must-have.
